MyReads: A Book Lending App

REVIEW	CODE REVIEW 8	HISTORY

▶ **src/App.js**   3

▶ **src/Book.js**   2

▶ **src/SearchBooks.js**   1

▼ **src/Bookshelf.js**   1

```
1  import React, { Component } from 'react';
2  import PropTypes from 'prop-types'
3  import Book from './Book'
4
5  class Bookshelf extends Component {
```

SUGGESTION

Since this component does not have state you can use Functional Stateless Component here as well.

```
6    constructor(props) {
7        super(props)
8        this.handleBookChange = this.handleBookChange.bind(this)
9    }
10
11   static propTypes = {
12     books: PropTypes.array.isRequired,
13     bookshelfTitle: PropTypes.string
14   }
15
16   handleBookChange(book, shelf) {
17       this.props.onUpdateBook(book, shelf)
18   }
19
20   render() {
21     const { bookshelfTitle, books } = this.props
22
23     let showBooks = books
24     let showShelfTitle = bookshelfTitle
25
26     return (
27       <div className="bookshelf">
28         <h2 className="bookshelf-title">{showShelfTitle}</h2>
29
30         <div className="bookshelf-books">
31             <Book
32               books={showBooks}
33               onBookChange={this.handleBookChange}
34             />
35         </div>
36       </div>
37     )
38   }
39 }
40
41 export default Bookshelf
```
